

# Source

I thought my act test was today.

It was yesterday.

I spent a total of 30 minutes or so walking around a highschool trying to open every single door.

I finally checked my test ticket and realized the date said saturday june 13. no wonder no one else was in the parking lot.

# Summary

The author mistakenly believed their ACT test was on a certain day and ended up wandering around an empty high school for about half an hour, trying to gain access. They eventually checked their test ticket, realizing the ACT was scheduled for the previous day, which explained the empty parking lot and **locked school** .

Is there information in the source that contradicts the unsupported/partially supported span?

no

Based on contextual information in the source, would you arrive at a similar interpretation?

Maybe (other interpretations could also be valid)

How common is the knowledge used in making or correcting this inference?

Common (entirely based on common sense or general understanding)

How significant could the impact of the inconsistent span be if the interpretation were accepted as true?

Moderate impact (some potential for misunderstanding )
